SAFARI BROWSER on an APPLE MAC COMPUTER

HOW TO CLEAR THE CACHE:

Why do I need to clear the cache?

If you are having difficulties accessing the BMB website, this may be the result of what is called "browser caching".

This is where your web browser keeps copies of frequently visited web pages to reduce load times.

This caching works really well for pages that don't change but can cause problems with interactive websites such as Bernard Magee Bridge where content is frequently updated.

'Clearing the cache' normally resolved such issues.

This may also helps to resolve any browser issues you have after a system or security updates on your device.

You can clear the cache without deleting 'Saved Passwords / Log-in' or browser data.

# SAFARI BROWSER on an APPLE MAC COMPUTER
